📌 Product Memo: AI-Powered Wealth Advisor for Retail Investors

🧭 1. Title & One-Line Summary

Build an AI-powered wealth advisor for Indian retail investors to improve portfolio performance through personalized insights and automated decision support.

🎯 2. Problem Statement

Retail investors in India lack access to affordable, personalized financial advice. As a result:

- They make emotional and unstructured investment decisions
- Portfolios are poorly diversified
- Returns are suboptimal compared to benchmarks

This leads to:

- Low investor confidence
- High churn from platforms
- Missed long-term wealth creation opportunities

👥 3. Target Users

1. Beginner Investors

- Age: 22–35
- Invest via apps (Zerodha, Groww)
- Pain: Don't know what to buy/sell

2. Active DIY Investors

- Invest regularly
- Use multiple platforms
- Pain: No consolidated view + no insights

3. Emerging HNI Segment

- ₹10L–₹1Cr portfolio
- Want advisory but avoid high fees
- Pain: Lack of affordable advisors

🔍 4. Customer Journey & Pain Points

Step 1: Onboarding

- No risk profiling → random investing

Step 2: Investing

- FOMO-driven decisions
- No diversification guidance

Step 3: Monitoring

- No portfolio insights
- No performance benchmarks

Step 4: Rebalancing

- Users don't rebalance
- Emotional bias dominates

📊 5. Market Opportunity

- India retail investors growing rapidly (Demat accounts surge)
- Shift from physical assets → financial assets
- Increasing adoption of digital platforms

👉 **Opportunity:** Democratize wealth advisory using AI

💡 6. Solution Overview

Develop an **AI-powered advisory layer** that integrates with brokerage platforms and provides:

- Real-time portfolio analysis
- Personalized recommendations
- Automated monitoring & alerts

Goal:

👉 Move from "execution platform" → "intelligent wealth platform"

🤖 7. Role of Generative AI & Agentic AI

🔹 **Generative AI (Insight Layer)**

- "Explain my portfolio" in simple language
- Daily/weekly performance summaries
- Risk explanation (e.g., "You are overexposed to IT sector")

🔹 **Agentic AI (Action Layer)**

- Autonomous portfolio monitoring
- Rebalancing recommendations
- Goal tracking (retirement, wealth creation)

Example:

An AI agent detects:

- Equity allocation increased from 60% → 75%

👉 Suggests:

- "Reduce equity exposure by 10% to maintain your risk profile"

🧱 8. Features (MVP vs Future)

🚀 **MVP (0–6 months)**

- Portfolio tracking
- Risk score calculation
- Asset allocation visualization
- Alerts (overexposure, underperformance)

🔄 **Phase 2 (6–12 months)**

- AI-generated insights
- Personalized recommendations
- Goal-based investing

🤖 **Phase 3 (12–24 months)**

- Autonomous AI advisor
- Auto-rebalancing (user-approved)
- Predictive analytics

⚖️ 9. Prioritization (RICE)

Feature	Reach	Impact	Confidence	Effort	Priority
Portfolio Tracking	High	High	High	Low	⭐⭐⭐⭐⭐
Risk Score	High	High	Medium	Medium	⭐⭐⭐⭐
AI Insights	Medium	High	Medium	High	⭐⭐⭐
Auto-Rebalancing	Low	Very High	Low	High	⭐⭐

👉 Focus first on **visibility** → **insights** → **automation**

📈 10. Success Metrics

🌟 **North Star Metric:**

- % improvement in portfolio risk-adjusted returns

📊 **Supporting Metrics:**

- Daily Active Users (DAU)
- Retention (30-day, 90-day)
- Feature adoption rate
- AUM growth
- Portfolio diversification score

💰 11. Business Model

- Freemium model
  - Free: Portfolio tracking + basic insights
  - Paid (₹499–₹999/month): AI advisory
- Future:
  - % of AUM
  - B2B partnerships with brokers

🚀 12. Go-To-Market Strategy

Phase 1:

- Target DIY investors
- Integrate with brokers

Phase 2:

- Content-led growth (YouTube, Instagram)
- Financial literacy campaigns

Phase 3:

- Partnerships with fintech platforms

⚠️ 13. Risks & Trade-offs

1. Regulatory Risk

- SEBI restrictions on advisory

  👉 Solution: Compliance-first design

2. Trust Risk

- Wrong AI recommendations

  👉 Solution: Human override + explainability

3. Data Privacy

- Sensitive financial data

  👉 Solution: Encryption + secure APIs

🛣️ 14. Roadmap

Phase 1 (0–6 months)

- MVP launch
- Portfolio tracking

Phase 2 (6–12 months)

- AI insights
- Personalization

Phase 3 (12–24 months)

- Autonomous advisory
- Scaling

🏗️ 15. High-Level Architecture

- Broker APIs integration

- Data pipeline (portfolio data)
- AI layer (LLMs + analytics engine)
- User dashboard (web/mobile)

🎯 16. Key Takeaways

- Strong user problem (lack of advisory)
- Large market opportunity
- AI enables scalable personalization
- Gradual move: Insights → Automation → Autonomy
