System Architecture AI-Powered Wealth Advisor

1. Overview

This system connects with brokerage platforms, processes portfolio data, and provides AI-driven insights to users.

2. Data Flow (Step-by-Step)

1. User connects broker account
2. Data fetched via APIs
3. Data stored in database
4. AI analyzes portfolio
5. Insights shown on dashboard

3. Key Components

1. Broker APIs

- Integration with platforms like Zerodha, Groww
- Fetch portfolio data

2. Database

- Store user data
- Store portfolio history

3. AI Engine

- Risk calculation
- Portfolio analysis
- Recommendation generation

4. Frontend (App)

- Dashboard
- Charts & insights
- Alerts

4. AI Layer

Generative AI

- Explain portfolio
- Provide summaries

Analytics Engine

- Calculate risk
- Detect overexposure

5. Security

- Encrypted data storage
- Secure API connections
- User authentication

6. Scalability

- Cloud-based system
- Modular architecture
- Can support large number of users

🎯 **7. Future Enhancements**

- Real-time data processing
- Auto-rebalancing engine
- Predictive analytics
